

Green News 2020-21

Due to the pandemic COVID-19, a “new normal” has been introduced that the green activities were held with online mode, under the suspension of campus and the restriction of social distance policy.

DIY Reusable Umbrella Pouch Online Workshop

There are noises claiming that one-off plastic umbrella pouch is one of the waste sources in HK. Although users nowadays are always being reminded to reuse the plastic pouch for keeping the wet umbrella during the rainy season, plastic is still a kind of materials that are not environment friendly. Being a smart and a green college, we worked with NGO “Greeners Action”, to bring us a “DIY Reusable Umbrella Pouch Online Workshop”. By using the old towels and some unwanted cloths obtained from old umbrella, a reusable umbrella pouch can be made. Participants have also learnt and experienced how unwanted materials can be “REUSE, RECYCLE and UPCYCLE”.

Upcycled Glass Bottle Mosaic Lamp Workshop

Glass bottle is a liquid container that is durable and can be frequently reused. It can also be used for upcycling to become a decoration. A “Upcycled Glass Bottle Mosaic Lamp Workshop” has been held at Februray in which participants have learnt to use the unwanted glass bottle to make a mosaic lamp. Although the technique of this kind of upcycling is not high, the process is full of fun. Students are quite satisfied to have their unique lamp.

Harvest Sharing

Thanks to the generous support from the tenants of the organic farm, they have shared their harvest to the college and students. A harvest sharing session has been held 19-March. Different kinds of crops, including beet, kohlrabi, kale and purple carrot, were placed at the booth. Students were free to take what they want from the booth. The session aims to raise the concern of organic farming and can attract students to join farming. If you have interest to be one of the farmers, please contact with the college office.
